Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 – it is unclear what is meant by recessing of connection straps...facing away from the support surface in lines 9-11.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hays (4,733,670) in view of Engel (4,539,996) and Netherly et al (5,836,942). The basic electrode is disclosed by Hays in Figure 2 as described at column 2, lines 18-61. The electrode of Hays fails to disclose the electrode having particular structural features (i.e., conductive adhesive on the aluminum, protective covering, and connector structure) as well as the particular dimensions. Engel discloses all of the structural features for such electrodes in Figures 1 and 2 (column 5, lines 4-50) to have been well known in the art. Further, Netherly et al disclose the particular connector structure for an electrode pair. Given these teachings, it would have been obvious to the skilled artisan to use such conventional features in Hays to effect superior signal detection

and electrode protection since such modifications would yield predictable results. Further, it is clear from the structure and placement of the electrodes in Hays that some of the claimed dimensions would be clearly met; however, the particular dimensions would, in any event, have been obvious to the skilled artisan to select to optimize performance of the electrode given the basic teaching of Hays.

Conclusion

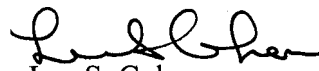

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
